

Chilled Water Buffer Tank

Features:

- Constructed in accordance with ASME Section VIII, Division I, Latest Edition
- Carbon Steel Construction
- Maximum Temperature 450° F Intermittent
- Design Pressure 125 P.S.I.
- Primed Exterior

Optional Features:

- Manway, Handhole
- Higher Pressures
- Stainless Steel Construction
- Upper Mounted System Connections
- External Coatings
- Insulation / Jacketing*

Center-line Height (A in inches) for various Connection*

DESCRIPTION: American Wheatley ASME Chilled Water Buffer Tanks are designed for chilled water systems with insufficient water volume capacity, in relation to the chiller capacity. Relatively low water volume systems require additional "buffer" capacity for the system to eliminate problems such as excessive chiller cycling, poor temperature control, and erratic system operation. The properly sized American Wheatley CBT tank adds the necessary volume to "buffer" the system.
